## Update on Johannesburg Water Infrastructure impacted by Rand Water's Eikenhof pump station

Majority of the systems have recovered in Soweto, Randburg, Roodepoort and Johannesburg Central. Furthermore, the Entity continues to monitor the system until fully recovery is attained.

### Recovering systems

The following systems indicate substantial improvement but remain low. Improvements are anticipated throughout the day, although certain areas within the supply zone may continue to experience low pressure. Direct feeds within the system have improved and are supplying fairly.

- Zondi reservoir and tower
- Protea Glen reservoir and tower
- Braamfischer reservoir
- Kensington-B reservoir
- Crosby reservoir
- Linden 2 reservoir
- Blairgowrie reservoir
- Kensington B tower

### Systems that have not recovered

The systems listed below are currently struggling to improve and the capacity levels are critically low. Poor pressure to no water is expected in the supply zones.

- Hursthill 1 & 2 reservoirs
- Linden 1 reservoir and tower

Johannesburg Water continues to monitor the areas that have not recovered and providing alternative water systems.
