

10 March 2024 – 13:50

### Systems update

The Palmiet pump station encountered a power outage around 08:30 this morning. Consequently, the pump station was offline for 1 hour and 30 minutes. However, the pump station has since been restored and is currently fully operational.

### Sandton System

- Bryanston and Illovo reservoirs and towers – both reservoirs and towers have been supplying normally over the past two days.
- Linbro Park, Morningside, and Marlboro reservoirs – capacity levels in all reservoirs have improved and supplying fairly to normal including the direct feeds (Linbro and Marlboro direct feeds).

### Central Region

- Berea and Alexandra Park reservoirs – the capacity levels remain low due to high demand. Poor pressure is expected in certain parts of the supply zone.

### Deep South Region

- Orange Farm, Ennerdale and Lawley reservoirs – all reservoirs are critically low due to high demand. Poor pressure to no water can be expected in the supply zone.
- Lenasia Hospital Hill and Lenasia High Level reservoirs – both reservoir levels are critically low and supplying fairly. However, poor pressure to no water is expected due to high demand.

Johannesburg Water continues to monitor all affected systems. Outlets of the critically low reservoirs will be throttled overnight to build capacity for the next day.

Alternative water supply is currently provided to affected areas.
