

DAILY WATER SUPPLY SYSTEM STATUS UPDATES

Water supply status update by exception (i.e., areas affected due to supply constraint and not service interruption from occasional pipe burst). **Tuesday, 21 May 2024 (Morning)**

UNPLANNED MAINTENANCES

Bryanston Pump Station and Tower

There is a pipe burst on the pumping main to the Bryanston Tower. As a result, pumping has been stopped so that the Johannesburg Water team can conduct assessments on the type of repairs and interventions required.

Consequently, water will be isolated (closed) and customers within the supply zone of the pump station and tower will be affected by poor pressure to no water until the work is completed.

The estimated completion time is 20:00 tonight, and if repairs have been completed successfully, it will take several hours for the water to fill the network and for customers to have normal water supply.

Areas affected: <https://www.johannesburgwater.co.za/bryanston-tower/>

Update on Randjieslaagte Reservoir

The fabrication process has been completed and ready for tomorrow when repairs will commence.

During the maintenance work, the supply zone will be supplied from the reservoir and the bypass to mitigate the impact to customers. No water may be experienced in certain parts of the supply zone.

The maintenance work is scheduled as follows:

Date: 21 May 2024

Time: 09:00 to 20:00

Purpose: Replacement of a section of the inlet pipe

Update: Lonehill and Beverly

Johannesburg Water is aware of the water supply issues in Lonehill and Beverly.

This is the result of a burst water pipe at corner Uranium and Winnie Mandela Drive in Fourways. Although the pipe was repaired on Friday and water restored to the other affected areas, water has still not been returned in Lonehill and Beverly.

To address the issue, technical teams will open water at Dennis Road; however, please note that this will result in a water leak along Lonehill Boulevard by the river next to the fire department.

Opening the valve may help relieve the poor pressure and restore water supply gradually throughout the day. There is currently no estimated time for restoration. Johannesburg Water is monitoring the situation.
